### Remarks:

#### FOB \$/lb

States the price for the coffee we paid to the coop/producer. This is the price also found in contracts and traditionally this is calculated in US-Dollar per pound.

#### FOB €/kg

For better understanding we calculated the Euro per kg price at the time of payment. As the \$/€ exchange is not always the same, the same \$/lb FOB might lead to different €/kg FOB.

#### Length of Relation with Coop

This states the year we first imported coffee from this coop/producer. AND we imported coffee from this producer every year since then This is what we think a relationship should be. (exception FAF where we started 2011 but did not import 2013, 2014)

Total number of coffees currently in use	12
- number of transparent coffees	11
- number of direct trade coffees	11
- number of organic coffees	10

Percentage of transparent coffees sold 2019 (Percentage of total kg) 76,07%
